

Claim

What I claim as my invention is to convert a motion sensor security light using the wires that turn this light on whenever the motion sensor is activated by someone or something to operate a tape recorder which would have a tape in it with two vicious barking dogs recorded on this tape. This tape plays for 60 seconds then starts over again as long as the power is on. It is an endless tape that plays the same thing over and over again, but this does not matter as the barking dogs always sound the same.

The motion sensor with lights attached is made to turn lights on whenever anyone or anything approaches it as can be seen in pictures page 1 and pictures page 2. The light fixtures can be removed so that the intruder does not know that he, she or it is being monitored, but lights can be left on if preferred but the person inside can see outside better to take evasive action. The barking of the dogs inside would not bother neighbours because it would only be heard close by. So you can set it and forget it.
